

The Galaxy simply makes light work

The culmination of Rank Strand's years of experience in designing and manufacturing Lighting Memory Control Systems for entertainment lighting around the world.

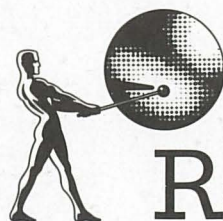

Galaxy

LIGHTING MEMORY SYSTEM

Rank Strand's latest system is designed for Television, Theatre, Conference and Exhibition Centres. In fact any situation where sophisticated, subtle, programmable repeatable lighting is needed. Because Galaxy is designed around the very latest microprocessor technology it incorporates every facility which our many customers recommended.

Galaxy is especially straight forward to operate, allowing the designer and operator to achieve subtle effects to respond to the unpredictable simply and quickly. The main difference between Galaxy and other systems is this. It is not primarily a complex machine to aid a mechanical function. It is the designers equivalent to an author's word processor – a simple and convenient way of setting down, amending, shaping and reproducing a creative contribution.
