**When we tested our competitor's gels,
they did a slow burn.**

After 90 mins

Ours didn't

As the saying goes, seeing is believing.

What you see above are actual photographs of our main competitor's filters after they were exposed in a real test to the heat of a spotlight.

Then below is Rosco's Supergel after the very same test.

It's not hard to see who can take the heat. And who can't.

If you're still sceptical, there's nothing to stop you performing the same test.

Pick up some of their filters and put them on hot lights for a while.

You've got to admit, it's not every company that invites you to buy from the competition.

But we feel pretty confident that it will probably be the last time.

Please rush me a swatch book and the new Supergel Guide pocket book on the only truly self-extinguishing gel.
