AVAB 201

-----  
Lighting Control System  
-----

A new Computer Controlled Lightboard for 12 or 24 Control Channels.

The sophisticated programme allows the 24 Faders to be used :-

- \* To set channel levels.
- \* To Set levels of all presets.
- \* To use presets as groups to build new presets.
- \* To create a timed sequence of presets.
- \* To set different timing to each channel in each preset (one channel one time).
- \* To assign presets automatically to the fader (with or without timer).
- \* To use channel assignment buttons as Flash Buttons.
- \* To program chase effects.
- \* To program colour effects.

In April 1984 a soft patch facility will become available which will provide control for up to 250 circuits (dimmers).

Several peripheral accessories are available including :-

- \* Infra red remote control.
- \* Remote trigger control.
- \* Multiplex modules for digital dimming control (conversion units are also available which modify some analogue dimmers for digital control.
