

THE *expert* APPROACH - A LIGHTING REVELATION

- Up to 512 dimmers on 512 control channels.
 - 800 average size cues.
 - MIDI in/out/through.
 - Real time clock and timer.
- Two monitors standard, up to 5 if required.
 - Pop up window menus and help screens.
 - Transfers data to any PC.
- Infra-red wireless remote control.

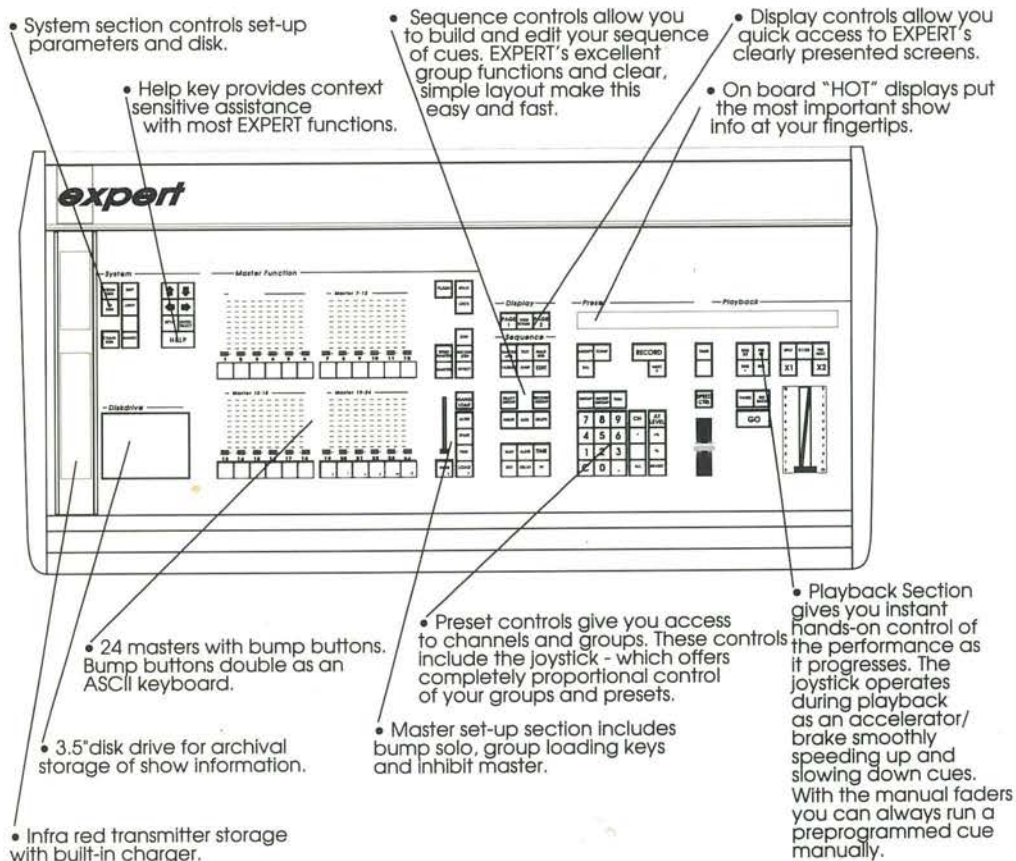

AVAB

expert is easy, simple and quick to use, but gives you the advanced functions and features AVAB is known for.

ELECTRONIC MANUAL

We have taken this user friendly approach a step further. We built an electronic manual into the board. This is not just a "help function" - it is an interactive manual which provides you assistance with any function - instantly. You can also edit this information into the form you want it - even incorporate your own notes in it.

expert allows you to reconfigure many of its functions to suit your needs and ways of working, and allows instant hands on control, improvisation, and quick edits during performance.

COMPATABILITY

expert is directly compatible with all dimmers using either AVAB or USITT DMX-512 protocols. With these two popular standards **expert** can be used with nearly any modern dimmer. The **expert** can be connected to almost any personal computer via an RS 232 line. You can load your show information into the personal computer and edit the data using a spread sheet program.

CLEAR DISPLAYS

expert boasts as standard dual screens which may be either color or monochrome CRT's or revolutionary FLAT PANEL displays for easy portability and compactness.

expert's pop up menus make operation simple and quick, even for the new operator.

MIDI

MIDI gives the **expert** owner free admission to a whole new world of control possibilities. MIDI is the widely accepted communication standard of the music industry - and **expert** has it. Through its MIDI port you can play **expert** with sequencers, samplers, and keyboards. Synchronize **expert** with any MIDI device (including another **expert**). Applications can be as simple as a fully tracking redundant backup to systems or as complicated as a fully automated performance.

INFRA-RED REMOTE CONTROL

AVAB's unique infra-red remote control allows you to control many functions of the board with a calculator sized, completely wireless remote.

PERIPHERALS

MONITORS - Two standard. Up to 5 available. IBM PC compatible monochrome or color or flat panel.

PRINTER - IBM Compatible Parallel printer.
