

**AVOLITES** **MAGELJET**

**SMALLER-FASTER-LIGHTER**

# AVOLITES GELJET

## THE MOST ADVANCED AND RELIABLE SCROLLING COLOR CHANGER AVAILABLE GELJET SETS NEW STANDARDS FOR THE INDUSTRY.

### SMALLER

At 10×10.5×2 inches, only slightly larger than a color frame, the remarkably compact GelJet combines unhampered focusing with ease of handling.

### FASTER

With up to 12 colors on a scroll and end to end access in under 2 seconds any color can be rapidly called up.

### LIGHTER

At 2.3 lbs., about half the weight of other scrolling color changers, GelJet coexists with moving yokes and allows exceptionally easy mounting and fixture focusing.

### VERSATILE

GelJet accepts mixed color media on the same scroll without loss of tension. Adaptor plates enable fitting to a variety of luminaires. The "wrap-around snap on face plate" is available in black or polished aluminum. (Custom color to order).

### EASY TO USE

GelJet's single cable for power and control inputs make it faster to setup. Changing the gel scroll requires no tools or special skills and takes only a minute.

### RELIABLE

GelJet's advanced design and components mean low maintenance. Two-way safety attachments mean greater safety for users. Made in the USA under rigorous quality standards. Users have the assurance of AVOLITES' traditionally prompt service in case of need.

### TECHNOLOGICALLY ADVANCED

Avolites computer lighting consoles work with you controlling GelJet either with standard analog outputs or with the new 'G' upgrade. The 'G' upgrade provides an additional 60 channels specifically for GelJet which when saved into the new color scene memory may be recalled at any time.

GelJets readily recover to accurately relocate color scenes in the event of power disruption. GelJets can be controlled from 0-10 volts and digital protocols. Now every make of lighting console can set GelJet color scenes.
