COLORSETTE 6

hand control colour change

Manual control semaphore colour change unit for Silhouette 10, 15, 25/ A hand operated unit primarily designed for follow-spot use; for the first time a unit capable of giving a selection of six interchangeable filters, it is completely reversible and may be operated left or right handed. Colour media is retained in the frame by means of plastic slide on clips enabling swift and easy filter change; literally colour control at your fingertips.

COLORSETTE 4. (Illustrated overleaf)

Remote control semaphore colour change unit for Silhouette 15, 25, 30, 40.

The semaphore system is the logical method of fast colour change, the selection is immediate, at the touch of a button the new colour drops into the unit and the old colour is rejected; no need to extinguish the lantern, all that will be noticed is a gentle cross-fade.

A particular advantage of this unit is its facility for colour mixing, two, three or four filters may be selected simultaneously increasing the colour range.

Sockets are provided on each unit to enable up to ten units to be linked together and operated from one master control, this facility is provided as standard and will greatly reduce outlay on heavily priced multicore cable.

Motors can be mounted to the left or right of the luminaires by reversing the mounting plate and guard which are retained by four Allen screws. Selection of a new colour can take place at the end of a full cycle which is 4 seconds in the case of a Silhouette 30/40 or 6 seconds for the Silhouette 15/25.
