

ED-2 Electronic Dimmer designed as self-contained strip incorporating dimmer and control lever. Ideal for grouping into custom-built Panel, externally mounted fuses give full protection.

Note: Dimmer should not be used for fluorescent loads.

Cat. No.	Manual dimmer with control	Size	Price each £
ED-2	2 kw	250 x 41 x 100 mms	22.50

CUSTOM BUILT SWITCHBOARD

The accompanying illustration represents a typical custom built control Panel incorporating 2 kw ED-2 strips, each Dimmer rated at 2 kw and provided with additional switching to suit customer requirements. By using a simple strip, it is possible to arrange for different groups of Dimmer controls to suit individual requirements and to provide

extra facilities in the form of colour controls, Auditorium lighting and Effects Lighting on the same Panel. Facilities can be provided whereby a minimum number of Dimmer strips can be fitted and extensions built up by the user over a period of time according to funds available.

ELECTRONIC DIMMER REMOTE CONTROL

EDRC System

Electronic Dimmer, Remote Control is a system designed to provide pre-setting and remote control facilities without the sophistication of the more advanced EDA control. From the experience gained during the last year, the system has been modified and is now based on the lines of the well tried Resistance system SRDP using a 6-way Dimmer Module. Dimmers are rated at 2 kw and basically the system is designed for single phase operation. A range of Racks and Control Panels are available to give the user combinations of up to 24 circuits. Racks can be fitted with 5 amp socket outlets two per Dimmer Channel, separately fused to give additional protection so that the Rack forms its own patching arrangement. 6-way units are portable, the remainder arranged for wall and floor mounting. Control Desks are offered in fixed combinations 6-way single lever, 12, 18, and 24-way, two lever for pre-setting with two masters. All Control Desks are complete with 10 metres of control cable, one cable being provided per 6-way unit. Additional matching pieces are available for bolting onto the control desk for incorporating auxiliary circuits, colour wheels etc., which can be supplied at extra cost, providing space is available within the nominated Dimmer Rack.

Extra price for 5 amp socket outlets. 2 per dimmer channel at £3.76 per way.

Cat. No.	Description	Price each £
EDRC-6	6-way Single Lever	209.17
EDRC-12	12-way Twin Lever	470.31
EDRC-18	18-way Twin Lever	671.66
EDRC-24	24-way Twin Lever	967.50
