

# HOW TOUGH ?

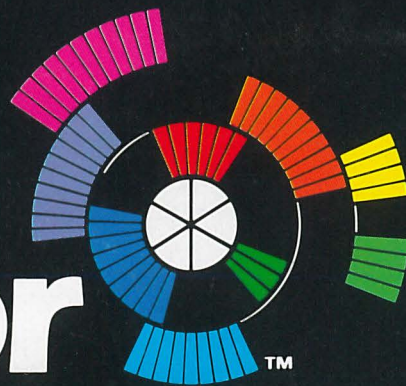

GamColors and GamColor CineFilters — tough enough to take the heat on stage, on location, and in the studio.

GamColor lasts longer than others because it is made of heat-resistant, scratch-resistant polyester — a material selected after rigorous testing for clarity and durability. It has a higher melting point than polycarbonate. It is a consistent .002" thick. The dyes used in GamColor are the purest available.

GamColor is the filter proved best for long days, long runs and hot lights. Call The Great American Market for the name of a dealer near you.

**GamColor. Tough.**

# GamColor

Deep dyed polyester color filters

GamColor is made in U.S.A.
