

# STRAND REMOTE CONTROL

## ELECTRONIC TYPE

(PATENTS PENDING)

*A typical Electronic type switchboard as installed at the National Theatre, Iceland.*

The widespread use of electronic circuits during the war has proved their reliability over prolonged periods and has led to their adoption for more peaceful purposes.

Now Strand Electric have utilised these principles for the control of stage lighting. The result, as the following pages show, is a switchboard which, while embodying a large number of new facilities, preserves the standard layout and method of operation familiar in so many theatres all over the world to-day.
