

# FLOODLIGHTS

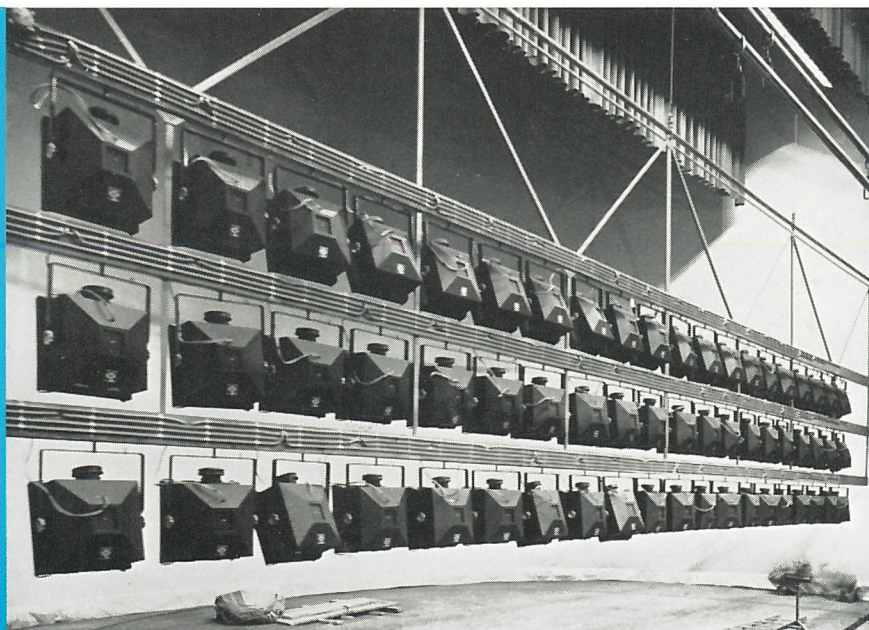

## Patt 49 1000 Watt

This shallow floodlight provides an evenly-distributed beam with exceptionally wide beam spread.

One or two banks of these units are recommended for even colour lighting of a curved cyclorama in a large theatre or opera house.

Individual units are useful for the lighting of window backings and similar scenic backgrounds at close range.

Falkonercentret, Copenhagen has a three-tier cyclorama lighting bank of sixty Pattern 49 Floodlights.

The Pattern 49T, manufactured to order only, has a re-positioned medium pre-focus lampholder for a high efficiency 1000-watt projection lamp.
