

EFFECTS SPOTS

Patt 202 series, 250 Watt 24 Volt. (A.C. ONLY)

This compact and inexpensive effects spot has a built-in transformer for a 250-watt 24 volt tungsten halogen lamp. In performance it bridges the gap between the 100-watt Minispot range and the full scale theatre and studio 1500/2000-watt projectors. Each Patt. 202 is supplied complete with a rim-driven $4\frac{3}{4}$ in. diameter effects disc and a pair of objective lenses providing a wide maximum beam spread of 45° . The effects disc and motor drive are mounted on a backplate which can be rotated around the optical axis to allow adjustment to the angle of motion.

The type of effect disc supplied is identified by the suffix to the pattern number; there is a choice of Storm Clouds (-/SC), Fleecy Clouds (-/FC), Snow (-/S), Flames (-/F), or the unique Kaleidospot disc (-/K) with its set of six alternative break-up pattern discs which provide a whole repertoire of continuously changing abstract images.
