

BRIO 25/50

Strand

Strand introduces the Brio 600W zoom 'coolbeam' combining all the advantages of a high output, 'coolbeam' spotlight with the additional flexibility of zoom optics. Brio encompasses a number of features at a very affordable price, representing true value for money! Take a look at the benefits...

- ▶ Zoom optics for a wide range of beam angles
- ▶ Two models to choose from, offering a flexible approach to lighting needs
- ▶ Compact and lightweight at only 6 kilos, making Brio ideal for tight rigging situations
- ▶ More light at a lower wattage!

Zooming In

Brio's zoom optics provide a wide range of beam angles from the two models available. Brio also offers the flexibility needed for a wide variety of lighting positions. The Brio 18/30 allows choice of 18° minimum to 30° maximum at 3° intervals and the Brio 25/50 delivers 25° minimum to 50° maximum at 5° intervals.

Cool Beam

The Brio provides superb beam distribution and exceptional light output, utilising an EOS coated glass dichroic reflector which is durable with no rough edges. The 'coolbeam' equates to less heat inside the fitting, extending the life of filter, shutters and gobos. And in the unlikely event that a dichroic reflector replacement is necessary, changing it is a simple task.

Energy Efficient

Brio at 600W is more than equal in performance to a conventional 1.2kW fixture and other equivalent fixed angle units. Brio uses the GKV (HX600) 600W lamp which has a reputation for lamp life reliability and is less expensive than a custom designed lamp. Brio can provide reduced lamp costs and power savings of up to 50%!

Easy to Focus

Brio has a smooth action lens adjustment and click stop positioning which allows the beam angle to be accurately set, even in the pitch dark. Adjustment for lamp centering and flat/peaky field is simple. Additionally Brio is safe and easy to use, with a heat resistant handle ensuring no risk of burnt fingers!

Light Lifting

Brio weighs in at only 6 kilos! Easy to carry, simple to rig and smaller than its nearest zoom profile competitor, it is ideal for those tight rigging situations.

Easy Access

Brio has easy access with the top lamphouse sliding open to allow gobo or iris to be fitted. The cover then closes to prevent any light spill. It can also be fully opened to allow for lens cleaning or maintenance.

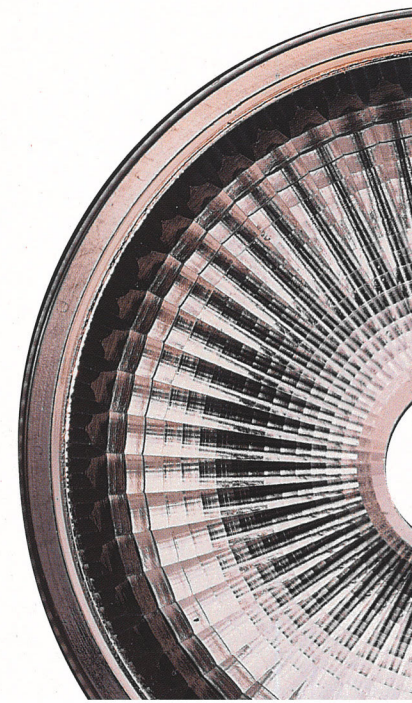

Stamp of Approval

Brio comes from Strand Lighting, a reputable company dedicated to manufacturing products which exceed current standards. Brio, from concept, meets all the requirements of EU legislation.
