

# HMI PARS

## 200W-12kW using single ended MSR lamps

Strand QuartzColor's 200 watt to 12Kw PAR's are the only range of Parlights designed from the beginning as a complete family. They have been developed specifically for the location lighting market, following extensive consultation with many international industry professionals. No other range of Parlights in the market today provides as many benefits as the new Strand QuartzColor range, with its superior optics, ease of use and ease of maintenance.

- A complete family, from 200W to 12kW, using single-ended MSR lamps.
- All units with redesigned optics, new lenses and new reflectors, giving exceptional optical performance
- Improved light quality and output, featuring better quality distribution, providing a flatter, more even field
- Use of common parts and accessories throughout the range, thus reducing the number of spares required. This is a key feature for rental houses.

- Interchangeable accessories, reducing the need for rental houses to stock many specific accessories for each product
- Parlights have colour coded 5 lens system for easy identification, in carry case so that the complete set is readily available.
- All heads supplied with barndoor, a set of 5 lenses in case, and head to ballast cable.
- PAR 200W and PAR 575W are also available in special kits, giving the user all the components they may need in the same case.
- The complete range is UL and cUL approved and bears the international CE mark.
