

Light Palette

Moving Light Consoles for the 21st Century

At last, the next generation of Light Palette consoles has arrived. Based on our powerful Palette OS with its direct action point and click graphical interface, these new consoles offer control to meet productions of any size. Systems are available from 1500 to 8000 channels with over 32,000 DMX outputs, providing exceptional range and control.

Light Palette has a powerful web browser that lets you configure and monitor your network and interact directly with Strand's award-winning C21 and EC21 dimming systems. Right there on the console screen. And Light Palette is an elegant and highly functional lighting console, leveraging industry-standard technologies and making it easy to communicate with other cool products (and not just ours) over the network. Whether you want to visualise your show with WYSIWYG or run a PowerPoint projection, Light Palette connects quickly and easily. Light Palette provides full support for multi-console operation as well. Now you can have one operator program conventional lights while another programs moving lights simultaneously on the same show.

And Light Palette's brain is a rugged industrial PC with a powerful Dual Core processor that could be swapped in seconds if you ever needed to. Which you most likely wouldn't. Palette has an 80 gigabyte hard drive, or you can save your shows anywhere on the network. Tracking back-up is available, too, either through a multi-console system or with a Rack Palette Back-up for total security for your show. You even get a USB key for show storage. On us. How cool is that?

PaletteOffline™ runs in Windows and imports Strand 300 and 500 series show files, so you can mix, match and swap to your heart's content.

All Light Palettes feature the latest in moving light control for shows of any size.

Communicating with your console has never been easier, as the latest generation of Light Palette brings real world language to your programming. Pan 50 degrees – Tilt 20 degrees are among the many instructions that you can apply to your rig.

Need to change a light out for a different model? No problem. Light Palette will automatically adjust for the new light and make your show look right.

Coliseum, English National Opera
