

# 200 Plus Programming Tips and Tricks

PHILIPS  
Strand Lighting

## USB Drive Functionality

This 200 Plus Tips and Tricks Bulletin is for informational purposes only concerning the use of a USB drive with the Strand Lighting 200 Plus console. The function of this document is to ensure users are aware of the folders that need to be on a USB drive before completing the following actions:

- LED patching
- Moving Light patching
- Downloading a show file to a USB drive
- Uploading a show to the console from a USB drive.

**Step 1.** Download the relevant 200 Plus file for your 12/24 console or 24/48 console from the Strand Lighting Website. There are 2 libraries for each size of console. Links for the first one can be found below...

### **200 Plus Series Console – 12/24 Fixture Library**

<http://www.strandlighting.com/clientuploads/directory/downloads/STR20024.zip>

### **200 Plus Series Console – 24/48 Fixture Library**

<http://www.strandlighting.com/clientuploads/directory/downloads/STR20048.zip>

**Step 2.** Copy the relevant downloaded file onto a blank USB drive.

The main folder in the USB drive should like the image in **Figure 1** for the 24/48.

Name	Type
STR20048	Folder

**Figure 1: Main Folder Layout**

The sub folder found in the main folder in the USB drive should like the image in **Figure 2**.

Name	Type
DMXBASE	Folder
FLIB	Folder
LEDLIB	Folder
LIB	Folder
WGA	Folder

**Figure 2: Sub Folder Layout**

The USB stick will now be ready for use with the 200 Plus console.
