## Appendix

This appendix contains information on:

- The Control Signal Path Diagram.
- A Summary of LD90 Parameters.
- The fluorescent dimmer relay connections.
- The wiring for the Power Blocks.

## Control Signal Path The following diagram illustrates the control signal flow throughout the Diagram LD90 dimmer. It is included to show how each of the programmable settings interrelates.

There are several important features of the above diagram:

1. The relationship between the Mux A, Mux B, analogue inputs and Presets. Note particularly the precedence between the preset selected by NoMux, and that selected by the SWC or SV90
2. The local rack keypad overrides all external control signals.
3. The Analogue outputs are independent of the law, max. voltage, response time, min level, and fluorescent functions. It is assumed that the external dimmer will perform these functions.
4. The Cycle-by-cycle voltage and frequency compensation built into the system software.

## Summary of LD90 Parameters

The following describes the format of the various LD90 system parameters and user-programmable functions, and gives allowable limits and default settings.

| Feature | Range - Min. | Range - Max. | Default |
| :---: | :---: | :---: | :---: |
| Busbar Current |  | $\begin{aligned} & \text { 100A/Phase, 300A } \\ & \text { Single Phase } \end{aligned}$ |  |
| Dimmer Law | Linear <br> Square <br> S-Law <br> Fluorescent |  | Square |
| Dimmer Name | 00000 | ZZZZZ | = mux address |
| Dimmer Response | Fast (30mS) | Slow (300mS) | Medium (100mS) |
| Error Number | 1 | 99999 |  |
| Input Voltage (D54 Input) | 4V | 6 V | 5 V |
| Input Voltage <br> (Analogue inputs) | +/-7V | +/-13V | +/-10V |
| Input Impedance (Analogue inputs) | -5\% | +5\% | $100 \mathrm{k} \Omega$ |
| Load Connection sizes | $1.5 \mathrm{~mm}^{2}$ | $\begin{aligned} & 6 \mathrm{~mm}^{2} / 2.5 \mathrm{~kW}, \\ & 6 \mathrm{~mm}^{2} / 5 \mathrm{~kW}, 16 \mathrm{~mm}^{2} \\ & \text { via kit. } \end{aligned}$ | As application requires |
| Language | English <br> French <br> German |  | English |
| Maximum dimmer O/P voltage | 50 V | 250 V | 230 V |
| Mux Protocol A | DMX512 <br> SMX (all baud rates) <br> D54 |  | DMX512 |
| Mux Protocol B | DMX512 <br> SMX (all baud rates) |  | DMX512 |
| Non-Dim threshold | 1\% | 90\% | Disabled |
| Output Voltage (Analogue Outputs) | $+5 \mathrm{~V}$ | $+10 \mathrm{~V}$ | $+10 \mathrm{~V}$ |
| Output Impedance <br> (Analogue Outputs) | -5\% | +5\% | $1 \mathrm{k} \Omega$, in series with diode |
| Phase Type | A | C | A |
| Presets | 0 | 99 | 0 |
| Preset Fade Time | 0.01 seconds | 9.59 minutes | 5 seconds |
| Rack Number | 1 | 99 | 1 |

Rack Size:
Contracting panel:
Conduit Entry:

Typical Weights Rack, empty:
Rack, with Power Blocks: 76kg
Rack, Packed and crated: 135kg
$1050 \times 995 \times 150 \mathrm{~mm}$ $505 \times 135 \mathrm{~mm}$
$1 \times 50 \mathrm{~mm}$ and $1 \times 25 \mathrm{~mm}$

42 kg

Fluorescent Relay Drive output connection details

PL5 on the Processor Unit PCB has 12 open-collector outputs and an unregulated supply connection. Each output is capable of sinking 5 mA for an electronic relay or similar and output 1 corresponds with the first dimmer in the rack. These outputs are driven when MAGNETIC fluorescent control mode is selected (see Rack Setup Procedure for details)

The connector is a 20 pin IDC (ribbon) style.

| Pin | Function | Pin | Function |
| :--- | :--- | :--- | :--- |
| 1 | Relay drive 1 | 11 | Relay drive 7 |
| 2 | GND | 12 | GND |
| 3 | Relay drive 2 | 13 | Relay drive 8 |
| 4 | GND | 14 | GND |
| 5 | Relay drive 3 | 15 | Relay drive 9 |
| 6 | Relay drive 4 | 16 | Relay drive 10 |
| 7 | Relay drive 5 | 17 | Relay drive 11 |
| 8 | Relay drive 6 | 18 | Relay drive 12 |
| 9 | +8V unregulated <br> (do not short <br> circuit | 19 | +8V unregulated <br> (do not short <br> circuit |
| 10 | No connection | 20 | No connection |
