THEATRE LIGHTING

SUB-KILOWATT FLOODLIGHTS

Made in England, these sub-kilowatt luminaires can be used for wide angle lighting of acting areas, back cloths and cycloramas.

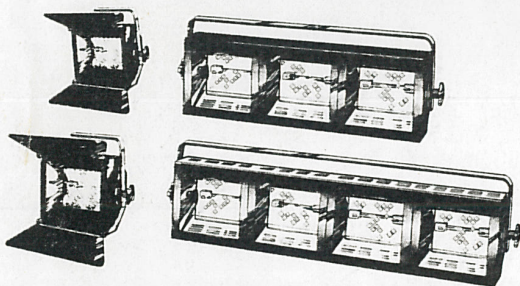

They can be fitted with double ended Tungsten Halogen lamps of varying wattages giving added versatility.

Good lamp protection is given by the wire mesh guard and colour filter holders are fitted as standard. The barn doors fold flat over the front giving added lamp protection during transit, and are fitted as standard on single units.

The overall construction is designed to give strength, light weight and low skin temperature.

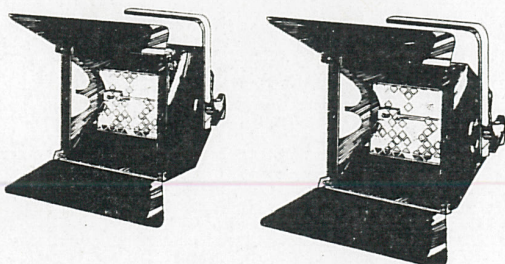

There are three versions, single, three lamp and four lamp units available in each model.

The Floodlights are of rugged construction, and are finished in tough black texture epoxy paint.

1000/2000 WATT FLOODLIGHTS

These larger versions of the sub-kilowatt floodlights are light-weight, easily portable units, producing a wide angled evenly spread light. Colour filters and barn doors are readily fitted.

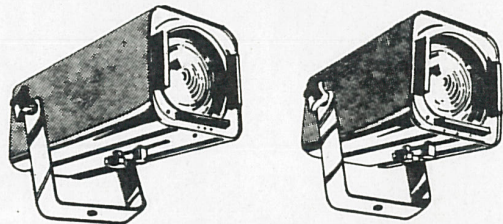

£75.-

PROFILE/FRESNEL/PLANO CONVEX SPOTLIGHTS

M. Series. These are fitted with an M33 H.P.V. 250 Watt 24V lamp with a life of some 300 hours and a colour temperature of 3200°K. Besides being equivalent in light output to many far more powerful spotlights one major advantage is that the cost of the M33 H.P.V. lamp is some six times less expensive than equivalent 1000W C.P. Lamps.

T Series. These can be fitted with either T18 500W 240V or T26 650W 240V lamps.

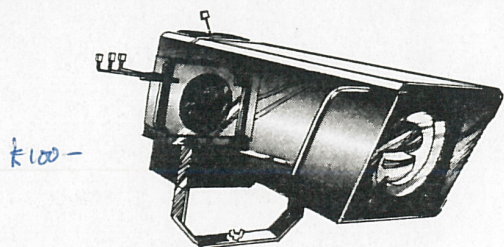

Access to the interior of all the units is through a hinged top cover making lamp replacement very speedy and simple. The trunion arm complete with locking knob allows the pan and tilt to be easily adjusted, and a new high efficiency reflector system achieves maximum brightness. Safety wire mesh is fitted to all units together with a safety chain retaining ring. Accessories available include, Barn Doors, Safety chain, colour wheel and ceiling mounting brackets.

FOLLOW SPOT

This follow spot uses a special M33 H.P.V. 250W 24V Tungsten Halogen Lamp giving a colour temperature of 3200°K.

The unit is extremely compact and comes complete with built-in iris/blackout and four colour filter shutters. It is fully equipped for ease of operation and is fitted with a twin lamp backup system.
