# Packaged Lighting Control 220/240V 50Hz

Tempus desks and dimmer packs combine to form a comprehensive and sophisticated range of lighting controls for up to 36 control channels. Up to date technology is employed to provide advanced operating facilities plus the highest standards of reliability and stability. Purpose designed aluminium extrusions ensure rugged strength to the attractive enclosures. Tempus desks are available for 12, 18, 24, 30 or 36 control channels, plus a 12-channel extension desk, without superfluous masters, which simply plugs into any other Tempus desk with a single, split cross fader for dipless or profiled proportional cross-fades between the intensity levels set on the two presets of channel faders. In addition crossfades can be automatically timed between 5 seconds and 5 minutes. A 6-lever control box, with master fader, is also available.

Tempus dimmer packs house either 6×10A Thyristor dimmers each with twin output sockets, or 3×20A dimmers. A full range of accessories is available for plug-together interconnection of dimmer

packs and remote desks; also transit covers and mounting brackets.

Tempus is an extendable system — it is not essential to have the full complement of dimmer packs initially: eventually even the original desk can be extended.

#### **Tempus Control Desks**

#### Specification

Desks for 12 or more control channels have two fader levers mounted one above the other and interconnected in a 2-preset network. Both presets are provided with an l.e.d. indicator and a blackout switch. Each preset is mastered by one half of the split crossfader — when operated together any channel, or channels, set to the same intensity level on both presets remain unchanged but all other channels change linearly. The rotary control allows the cross-fade to be automatically timed for 5 seconds to 5 minutes duration. In addition to dipless crossfades these can be profiled by advancing one half of the crossfader relative to the other half, or presets can be pile added with the highest intensity level of the two presets taking precedence

All fader levers have high quality carbon track potentiometers with integral slot closure and an effective scale length of 58mm. Each block of six control channels has self-contained mastering circuitry with the integrated control signal outputs to a 2m long flexible cable terminated by a robust, metalclad 8 pole plug with a mechanical latch. Mastering signals are duplicated to a DIN socket for interconnection of the mating plug fitted to the short linking cable of the 12-channel extension desk. Desk construction uses full length aluminium extrusions providing a recessed operational area and a carrying handle below the front edge.

## **Tempus Control Cables**

The 2m long control cable fitted to the desk for each block of 6 control channels can plug directly into a dimmer pack, or can be extended by one or more control extension cables which are fitted with mating plugs and sockets.

#### **Tempus Dimmer Packs**

### Specification

Each compact dimmer pack, with integral carrying handles, contains either 6×10A or 3×20A Thyristor dimmers for 220/240V tungsten lamp loads. The pair of Thyristors to each dimmer are mounted on generous heat-sinks and are surge and continuously rated for the maximum load. In addition to substantial industries filters to profession to substantial inductive filters, to professional theatre standard, each dimmer output and the incoming supply are fitted with radio frequency filters. The temperature and long term stable trigger cards serve no more than two dimmer channels.

The recessed front panel has twin output sockets for each 10Å dimmer channel or a 32Å 2 pole + E socket for 20Å dimmers. The same panel contains a power supply, indicator lamps and an 8-pole socket for the flexible control cable from the desk. The recess in the right hand end of the dimmer pack houses cable grip and pressure-pad terminals for the incoming 50Hz supply and place average gravent praction for each close-excess current protection for each dimmer channel together with neon indicators to show the status of the HRC cartridge fuse-links.

#### Tempus 10A/15

 $6 \times 10 \text{A}$  dimmer pack for 220/240V single phase and neutral plus earth supply, with shrouded-contact fusing and twin, shuttered 15A 3-pin sockets for each dimmer output

Tempus 10A/5

6×10A dimmer pack, as above, but with individually fused twin 5A 3-pin shuttered sockets for each dimmer output

Tempus 20A

3×20A dimmer pack for 240V single or three phase and neutral plus earth supply, with shrouded-contact fusing and 32A 2-pole + E CEE.17 socket for each dimmer output

Tempus 10A/C 6×10A dimmer pack for 220/ 380V three phase and neutral plus earth supply, with Neozed fusing and twin hinged-lid Schuko sockets for each dimmer output

Tempus 25A/C 3×20A dimmer pack for 220/380V three phase and neutral plus earth supply, with Neozed fusing and 32A 2 pole +E CEE.17 socket for each dimmer output
