

# Strand technology moves further ahead...

**S**trand's new Precision Automated Lighting System (PALS) represents a major advance in lighting technology.

With computer-controlled luminaires incorporating integral microprocessors and motor/gearbox assemblies, PALS achieves high precision positioning to a resolution of one in a thousand — quietly, smoothly and effortlessly. So with PALS, the lighting designer can create and record complex lighting sequences, safe in the knowledge that they can be accurately repeated time and time again. This also means the designer needs fewer luminaires and shorter set up times. And the entire system can be controlled by one operator.

PALS is the latest in a long line of Strand innovations. For more than 75 years, Strand Lighting has maintained a continually high level of investment in research and

development. Every year, we introduce increasingly sophisticated and reliable products — from follow spots for schools and halls to dimmers and controls for theatres, film and T.V. studios.

This commitment to creative product development ensures that Strand will always lead the way in entertainment lighting. Leaving others even further behind.
