

MAC 1200

- The World's most powerful moving head colorchanger

The MAC 1200 is the second Martin product, along with the PAL 1200 to enjoy the benefits of the Martin Global Network, the unique, international, rental structure for performance lighting professionals. This scheme ensures that wherever Martin's high performance products, such as the PAL 1200 or MAC 1200, are in use anywhere in the world, designers can always be certain of substantial support and back-up.

The MAC 1200 is the ultimate professional color mixing spotlight. Designed solely with international lighting designers in mind, the MAC 1200 is a precision driven-yoke mounted projector offering 440° of pan and 306° of tilt.

The MAC 1200 incorporates Martin's own (CMY) full color mixing system, which uses Cyan, Magenta and Yellow to create numerous colour choices and shades. Additionally the MAC 1200 is fitted with a four dichroic colour wheel plus open white.

The source of the MAC 1200's immense power is its intense MSR

1200 lamp in conjunction with the radical optical design.

Beam apertures available are in six different angles - 2°, 5°, 9°, 15°, 21° and the standard 32°.

Naturally control for the MAC 1200 can be from any industry standard DMX 512 lighting desk or the Martin 3032 controller.

Whatever professional application the MAC 1200 has all the capabilities to satisfy... and many more.

Dynamic and rational the Martin MAC 1200 is the definitive industry colorchanger.
